Re: Application for On-the-Job Training (OJT)

Dear [Mr./Ms. Last Name],

I am writing to apply for an On-the-Job Training (OJT) opportunity at [Company Name]. As a fourth-year Bachelor of Science in Information Technology student majoring in Business Informatics at PHINMA Araullo University, I bring a pairing that is increasingly uncommon in this field: the technical fluency to build and deploy working systems, and the business analysis discipline to make sure those systems solve the right problem first.

That pairing shaped every system I have built. For the Smart Scheduling System, which I led as Project Manager while developing it hands-on, the brief was never simply "build a scheduler" — manual planning made conflicts easy to miss and updates slow to communicate. The system now centralizes schedules, detects conflicts automatically, and pairs with an AI assistant and inventory management. For the Shoe Ordering System, I translated a store's catalog and order flow into an online experience where customers browse products, review details, and place orders. For the Simple Payroll Management System, I implemented the logic that computes employee pay, records deductions, and maintains payout history.

My recent professional development reinforces the technical side of that pairing: three Oracle University certifications earned in 2025 — Analytics Cloud, Cloud Infrastructure Networking, and Cloud Database Services — giving me grounded familiarity with the cloud, networking, and database platforms enterprise systems run on.

Since 2024 I have also served as Project Manager for student academic projects — coordinating timelines and milestones, delegating responsibilities, supporting team communication, and handling documentation and reporting in Microsoft Office. I am comfortable owning delivery while still writing the code myself. Independently, I build and deploy my own tools: this portfolio is a full-stack Next.js, TypeScript, and Tailwind CSS application with a secured admin dashboard, a full API layer, and an integrated AI assistant.

What draws me to [Company Name] is [your team's work on X / your approach to Y]. I would welcome the chance to contribute this combination of business understanding and technical execution to your team.

I am available to begin on [START DATE] and can commit to [HOURS PER WEEK] for the full program, as OJT is a requirement for completing my degree. I have enclosed my resume and would be glad to walk you through any of these projects live. Thank you for your time and consideration.

Sincerely,

Marcus Mallari
